Education

Australian National University – Canberra, ACT
Bachelor of Advanced Computing
Specialisation in Human-Centered & Creative Computing

Expected Dec 2026

Technical Skills

- **Programming Languages:** JavaScript, TypeScript, C#, Java, SQL
- **Frontend:** React, React Native, React Router, HTML, CSS, Tailwind CSS
- **Backend & Databases:** Node.js, Express.js, PostgreSQL, Prisma
- **Development Tools:** Git, GitHub, Docker, VS Code, npm, Vercel, Vitest, Unity
- **Software Development Concepts:** Agile, Object-Oriented Programming

Experience

Coles Belconnen

Mar 2019 – Aug 2024

Team Member

- Entrusted with store-closing procedures, resolving customer concerns and responding to operational issues.
- Held primary responsibility for daily meat-department operations for approximately two years, managing stock availability, product rotation and presentation while supporting other departments when required.

Majura Winery

Jan 2020 – Mar 2020

Labourer

- Worked as part of a team to support vineyard and production operations, following safety procedures and adapting to changing priorities to complete physically demanding tasks within daily deadlines.

Projects

J_FORCE Video Game | Unity, C# | GitHub

Feb 2025 – Nov 2025

- Collaborated with a six-person multidisciplinary team comprising three developers and three artists to develop a dystopian role-playing game in Unity.
- Owned the design and implementation of the enemy AI and pathfinding systems, using a finite-state machine and Unity NavMesh to support patrol, pursuit and combat behaviours.
- Coordinated technical requirements with developers and artists to ensure gameplay systems worked with level designs, animations and visual assets.

Weather Dashboard | React, TypeScript, Tailwind CSS | Live Site | GitHub

Jun 2026

- Developed a responsive React and TypeScript weather dashboard with debounced city search, device geolocation, current conditions, selectable seven-day forecasts and detailed hourly information.
- Integrated Open-Meteo and OpenStreetMap APIs to retrieve weather data, search locations and convert device coordinates into readable location names.
- Built a synchronised temperature and precipitation visualisation using Recharts and implemented persistent unit preferences, light and dark themes, loading states and error recovery.

Task Manager | React, TypeScript, Express.js, PostgreSQL | Live Site | GitHub

Jul 2026

- Directed and reviewed the AI-assisted development of a full-stack task-management application that allows authenticated users to create projects and manage tasks through configurable workflow states.
- Worked with a React and TypeScript frontend, Express API and PostgreSQL database, using Prisma for data access, JWT authentication, Zod validation and ownership checks for protected resources.
- Diagnosed and resolved deployment, client-side routing, CORS and environment-configuration issues while deploying the frontend to Vercel and the backend to Render.
